SECTION 01702P – MATERIAL STORAGE REQUIREMENTS

PART 1 SPECIAL REQUIREMENTS

1.1 Materials subject to corrosion or water damage shall not be delivered to the jobsite more than four weeks in advance of installation, and shall be properly protected from moisture, rain, and exposure in accordance with manufacturers’ instructions.

1.2 Due to concern with Indoor Air Quality, materials capable of adsorbing water or taking on moisture through exposure to humidity or water, if allowed to become damp or wet, shall be dried fully within 24 hours, or their use shall not be permitted. Dried materials showing water stains or other discoloration, or not allowed to be wetted and dried by manufacturers’ instructions, are not permitted.

1.3 No insulation that has been wetted or that is stained or shows other evidence of having been wetted shall be installed, and if found to be installed, shall be promptly replaced.

1.4 The list of products of particular concern includes but is not limited to: porous or cellulosic materials including certain insulation, ceiling tile, gypsum, lumber, wood products, carpet; and products containing ferrous materials or other metals prone to accelerated oxidation in the presence of water or water vapor.
