SECTION 09200

PLASTER (final)

PART 1 - GENERAL

1.01 Plaster may be used to patch and repair existing plaster surfaces.

1.02 RELATED WORK

A. Section 00100  General Conditions for as-built samples
B. Section 09901  Interior Paints and Coatings
C. Section 10260  Wall and Corner Guards

PART 2 - PRODUCTS

2.01 GYPSUM PLASTER

A. Shall be used for typical interior plaster applications.

2.02 PORTLAND CEMENT PLASTER

A. Shall be used for exterior applications [stucco] and for interior applications that require extreme strength and resistance to water.

2.03 VENEER PLASTER

A. May be used when a surface harder than drywall is required.

B. Veneer plaster is not allowed as a less expensive substitute for metal lath and plaster.

C. High strength plaster with a minimum of 3,000 psi compressive strength is required.

D. Two coat veneer plaster applications shall be used with a minimum total plaster thickness of 1/8” including both layers. Thickness shall be 1/16” if a one coat system is used.

PART 3 - EXECUTION

3.01 Control Joints are required to relieve stress and control cracking. At a minimum these joints shall be designed into the project per manufacturer’s recommendations.
3.02 Corner guards are required in all public spaces of dormitories and other vulnerable and high abuse areas. In new wall construction these guards shall be designed into the project and built in as opposed to added on.
