Table of Contents

Preface

(3 pp., 976 words)

Lesson 1. Introduction

(3 pp. 1155 words)

Lesson 2. Preferences and Utility

(23 pp. including 10 figures, 6400 words)

2.1 Introduction

2.2 The preference relation. Assumptions on preferences:

2.2.1. Completeness

2.2.2. Transitivity

2.2.3. Monotonicity

2.2.4. Convexity of indifference curves

2.3 The marginal rate of substitution

2.4 Utility functions

2.5 Utility functions and the marginal rate of substitution

2.6 A solved problem

Exercises (5)

Appendix: Differentiation of functions

Lesson 3. The Budget Constraint and the Consumer’s Optimal Choice

(24 pp. including 8 figures, 6744 words)

3.1 Introduction

3.2 The standard budget constraint, the budget set and the budget line

1
3.3 Shifts of the budget line

3.4 Odd budget constraints

3.4.1. 2-for-1 store coupons

3.4.2. Ration coupons

3.5 Income and consumption over time, with income this year only

3.6 Income and consumption over time, with income this year and next year

3.7 The consumer’s optimal choice: graphical analysis

3.7.1. Special case: \textit{MRS} not defined

3.7.2. Special case: corner solution

3.8 The consumer’s optimal choice: utility maximization subject to a budget constraint

3.8.1. Brute force method

3.8.2. Use-the-graphs method

3.8.3. Lagrange function method

3.9 Two solved problems

Exercises (6)

Appendix: Maximization subject to a constraint: the Lagrange function method

Lesson 4. Demand Functions

(23 pp. including 14 figures, 6846 words)

4.1 Introduction

4.2 Demand as a function of income

4.3 Demand as a function of price

4.3.1. Inverse demand
4.4 Demand as a function of price of the other good
4.5 Substitution and income effects
4.6 The compensated demand curve
4.7 Elasticity
4.8 The market demand curve
4.9 A solved problem

Exercises (6)

Lesson 5. Supply Functions for Labor and Savings

(21 pp. plus 11 figures, 7847 words)

5.1 Introduction to the supply of labor
5.2 Choice between consumption and leisure
5.2.1. The budget constraint
5.2.2. Preferences
5.3 Substitution and income effects in labor supply
5.4 Other types of budget constraints
5.4.1. Non-labor income
5.4.2. Unemployment benefits
5.4.3. Overtime
5.5 Taxing the consumer’s wages
5.6 Saving and borrowing
5.7 Intertemporal choice of consumption
5.7.1. The budget constraint
Lesson 6. Welfare Economics 1: The One-Person Case

(19 pp. plus 5 figures, 7349 words)

6.1 Introduction

6.2 Welfare comparison of a per unit tax and an equivalent lump sum tax

6.3 Rebating a per unit tax

6.4 Measuring a change in welfare for one person

6.4.1. Measuring one consumer’s welfare change in dollars, when one price rises, for a simple product utility function

6.5 Measuring welfare change for many people, a preliminary example

6.5.1 Measuring society’s preference for one program over another. Should schools teach music or art (if they cannot afford both)?

6.6 A solved problem

Exercises (6)

Appendix: Revealed preference

Lesson 7. Welfare Economics 2: The Many-Person Case

(16 pp. plus 5 figures, 6032 words)

7.1 Introduction

7.2 Quasilinear preferences

7.3 Consumer’s surplus

7.4 A consumer’s surplus example with quasilinear preferences
7.4.1 A quasilinear utility function, when one price rises; compensating variation, equivalent variation, and the change in consumer’s surplus

7.5 Consumers’ surplus

7.5.1 Build a bridge?

7.6 A last word on the quasilinearity assumption

7.7 A solved problem

Exercises (6)

Lesson 8. Theory of the Firm 1: The Single-Input Model

(21 pp. plus 10 rough figures, 7533 words)

8.1 Introduction

8.2 The competitive firm’s problem, focusing on its output

8.2.1. The production function

8.2.2. Price or market constraints

8.2.3. Profit

8.2.4. Total cost, average cost and marginal cost

8.2.5. Profit maximization with output as the choice variable

8.3 The competitive firm’s problem, focusing on its input

8.3.1 Marginal product and average product

8.3.2. Profit maximization with input as the choice variable

8.4 Multiple outputs

8.5. A solved problem

Exercises (6)

(22 pp. plus 10 figures, 8287 words)

9.1 Introduction

9.2 The production function in the long run

9.2.1. Marginal products of inputs, and assumptions about isoquants

9.2.2. Technical rate of substitution

9.2.3. Returns to scale

9.2.4. Marginal products and $TRS$ in the constant returns to scale case

9.3 Cost minimization in the long run

9.3.1. Isocost lines and the condition for cost minimization

9.3.2. The relation between long run cost curves and returns to scale

9.4 Profit maximization in the long run

9.4.1. Returns to scale and long run supply

9.5 A solved problem

Exercises (6)

(12 pp. plus 5 figures, 4147 words)

10.1 Introduction

10.2 The production function in the short run

10.3 Cost minimization in the short run

10.4 Profit maximization in the short run

10.5 A solved problem

Exercises (2)
Lesson 11. Perfectly Competitive Markets

(24 pp. plus 11 figures, 9605 words)

11.1 Introduction

11.2 Perfect competition

11.2.1. Price-taking behavior

11.2.3. Homogeneous goods

11.2.3. Perfect information

11.2.4. Free entry and exit in the long run

11.3 Industry supply

11.3.1. Two firms with different cost curves

11.3.2. Large number of identical firms

11.4 Equilibrium in a competitive market

11.5 Competitive equilibrium and social surplus maximization

11.6 The deadweight loss of a per unit tax

11.6.1. Effects of a per unit tax in the short run

11.6.2. Long run effects of per unit tax

11.7 A solved problem

Exercises (6)

Lesson 12. Monopoly and Monopolistic Competition

(24 pp. plus 6 figures, 8968 words)

12.1 Introduction

12.2 The classical solution to monopoly

12.3 Deadweight loss from monopoly: comparing monopoly and competition

12.4 Price discrimination
12.4.1. Common or third degree price discrimination
12.4.2. Perfect or first degree price discrimination

12.5 Monopolistic competition
12.6 A solved problem
Exercises (6)

Lesson 13. Duopoly

(23 pp. plus 6 figures, 8070 words)

13.1 Introduction
13.2 Cournot competition
  13.2.1. Comparison with monopoly and competition
13.3 More on dynamics
13.4 Collusion
13.5 Stackelberg competition
13.6 Bertrand competition
  13.6.1 Homogeneous goods case
  13.6.2 Differentiated goods case
13.7 A solved problem
Exercises (6)

Lesson 14. Game Theory

(23 pp. plus 7 figures, 9510 words)

14.1 Introduction
14.2 The prisoners’ dilemma game, and the idea of dominant strategy equilibrium
14.3 Prisoners’ dilemma complications: experimental evidence and repeated games
14.4 The battle of the sexes game, and the idea of Nash equilibrium
14.5 Battle of the sexes complications: multiple or no Nash equilibria, and mixed strategies
14.6 The expanded battle of the sexes, when more opportunities make players worse off
14.7 Sequential move games
14.8 Threats
14.9 A solved problem
Exercises (6)

Lesson 15. An Exchange Economy

(24 pp. plus 9 figures, 8798 words)
15.1 Introduction
15.2 An economy with two consumers and two goods
15.3 Pareto efficiency
  15.3.1. Feasible allocations and the Edgeworth box
  15.3.2. Tangencies of indifference curves and the Edgeworth box
15.4 Competitive or Walrasian equilibrium
15.5 The two fundamental theorems of welfare economics
  15.4.1. First fundamental theorem of welfare economics
  15.4.2. Second fundamental theorem of welfare economics
15.6 A solved problem
Exercises (6)
Lesson 16. A Production Economy

(21 pp. plus 8 figures, 7799 words)

16.1 Introduction

16.2 A Robinson Crusoe production economy

16.3 Pareto efficiency

16.4 Walrasian or competitive equilibrium

16.4.1. The firm

16.4.2. The consumer

16.5 When there are two goods, bread and rum

16.6 The two welfare theorems revisited

16.6.1. First fundamental theorem of welfare economics

16.6.2. Second fundamental theorem of welfare economics

16.7 A solved problem

Exercises (6)

Lesson 17. Externalities

(24 pp. plus 2 figures, 8630 words)

17.1 Introduction

17.2 Examples of externalities

17.2.1. Hip-hop music

17.2.2. Flowers in your neighbor’s garden

17.2.3. Motorcycles with aftermarket pipes

17.2.4. Food consumption by people you care about

17.2.5. A steel producer on a river
17.2.6. Fossil fuels and global warming

17.3 The steel producer and the fish farm

17.4 Classical solutions to the externality problem: Pigou and Coase

17.4.1 Pigouian taxes and subsidies

17.4.2 Coasian property rights

17.5 Modern solutions for the externality problem: Markets for pollution rights

17.6 Modern solutions for the externality problem: cap and trade

17.7 A solved problem

Exercises (6)

Lesson 18. Public Goods

(24 pp. plus 3 figures, 9197 words)

18.1 Introduction

18.2 Examples of public goods

18.2.1 National defense

18.2.2 Lighting on a city street

18.2.3 Fire departments

18.2.4. Broadcast television

18.2.5. Public parks, public libraries, public monuments

18.2.6. Public education, public health

18.2.7. Scientific and technical knowledge

18.3 A simple model of an economy with a public good

18.4 The Samuelson optimality condition

18.5 The “free rider” problem and voluntary contribution mechanisms

18.6 How to get efficiency in economies with public goods
18.6.1 Command policies
18.6.2 Wicksell/Lindahl taxes and the Lindahl equilibrium
18.6.3 Demand-revealing taxes

18.7 A solved problem

Exercises (6)

Lesson 19. Uncertainty and Expected Utility

(16 pp. plus 2 figures, 5967 words)

19.1 Introduction and examples

19.1.1. Used cars
19.1.2. New cars
19.1.3. Your college
19.1.4. Dangerous activities
19.1.5. Life insurance and annuities
19.1.6. Investments
19.1.7. Gambling

19.2 Von Neumann-Morgenstern expected utility. Preliminaries

19.3 Von Neumann-Morgenstern expected utility. Assumptions and conclusion.

19.3.1. Completeness and transitivity of preferences
19.3.2. Continuity
19.3.3. Independence
19.3.4. Unequal probabilities
19.3.5. Compound lotteries (complexity)
19.3.6. Von Neumann-Morgenstern expected utility theorem
19.4 Von Neumann-Morgenstern expected utility. Examples

19.4.1 Example showing von Neumann-Morgenstern utility is not ordinal
19.4.2 A risk averse consumer
19.4.3 A risk loving consumer
19.4.4 A risk neutral consumer

19.5 A solved problem

Exercises (6)

Lesson 20. Uncertainty and Asymmetric Information

(20 pp. plus 0 figures, 7833 words)

20.1 Introduction

20.2 When sellers know more than buyers: the market for “lemons”

20.3 When buyers know more than sellers: a market for health insurance

20.3.1 Health insurance/adverse selection example

20.4 When insurance encourages risk taking: moral hazard

20.4.1 Driving while on cell phone/moral hazard example

20.5 The principal-agent problem

20.5.1 Principal-agent example

20.6 What should be done about market failures caused by asymmetric information?

20.6.1. Signaling devices
20.6.2. Screening contracts
20.6.3. Monitoring
20.6.4. The legal system

20.7 A solved problem

Exercises (6)
