10/2/06

~~For~~ Finish Lot 3, Started on Lot #4. Unearthed animal hole/tunnel in NW corner. Dug to 36 cm in NE corner; NW corner short! @ 25 cm, otherwise rest of pit btwn 30-36 cm.

Found lots of mortar bits today, primarily in upper left (NE) quadrant. Also big finds: 1/2 marble, 1 marble/possible gumball, piece of shell (oyster?), rusted nails, small ~~red~~-diameter glass bottle top + neck ~~II~~, pieces of pottery (2) w/ blue glaze.

Adam and Corissa

Began a 3.5m in the NE corner where we decided to excavate a smaller area that measures (7.5 x 7.5) to find more material. There were

some significant finds like molified pottery and a muffled glass piece that was logged in our findings.

We found the shell and pottery in the upper left (NE) quadrant. Our final excavation depth was about 14cm, again in the upper left (NE) quadrant. We believe some type of construction or our test-pit area.

10/30

Today we finished lot 6 and almost completed lot 7 (the lower side requires a little more digging). It rained very heavily this weekend and lot 7 was very damp. We found ceramic, glass, rusted material, shell, coal and a few pieces of an unknown black object. The lot is currently 70cm is the majority of the lot.

Adan Braw + Lindsay

11/6 Finished Lot 7 -

found total of 51 objects -
mostly brick (some large pieces)
and glass, and a good number of
rusted nails.

Soil has turned from the brown rust
color to a harder-packed
grey/white clay mottled w/ rust colored +
Organic black - some stones,
but mostly clay.

Lot 8

- More clay, heavily mottled w/ rusty
colored soil + dark organic matter,
tree roots.

A few small (4 cm diameter) patches of very
fine sand (whitish) found near a
few nails. Also, white shell material found.
Course tan sand - found in SE patch of smelt pit -
very thin layers.

Today we discovered several brick fragments and they were mainly found along the north and south sides of the lot. The dirt/soil was very dry, but the lack of wind made digging ~~more~~ less troublesome today.

Lot 8 total:
