

9/18

Today we ~~we~~ cleared all the grass from our lot and reached a depth of 10 cm in the top region of the loft. The soil color changed according to where it was found in the lot. The bottom region was a darker color, almost a black and the top region was a lighter brown color. The dirt was generally <sup>very</sup> easy to dig up. The weather conditions today were sunny and hot.

9/25

Lot #1 was completed to 10cm today, along with the near completion of Lot #2. The soil was very loose and sandy, with extremely dry qualities and many small roots.

Several small rocks were mixed with the soil and a few artifacts were found.

A small piece of pottery displaying a design pattern was found, along with several pieces of glass, some brick and two thin pieces of glass that fit together with a matching line pattern. The weather is sunny and windy. Working on the site today were Cory and Zoe.

found coin? Face/back  
V. Good.

10/2

Finished lot 2, began lot 3.  
Found Rock arrangement along  
the eastern edge of pit. Piece  
of plaster in the southeastern portion  
of pit. Soil is very dry. Western  
side is almost claylike in places. Especially  
dry in east. 60°, sunny, slight winds.

### artifacts:

glass: TTT (3)  
Iron: TTTT (7) (nail: 1)  
brick: TTTT (8)  
pottery: 11 (3)  
~~coarse~~ (coarseware: 1)  
fineware: 11  
hematite/coal/charcoal?: 11 (3)  
shell: 1 (1)

10/16/06

Large piece of v. dark glass found in the middle of a jumble of rocks in the NW corner (0.75 x 0.75 pt)

We finished Lot 4 and started Lot 5. Sod a mix btwn a dark clay-like, moist but easy to move, and then patches of orange sandy soil & a light tan soil. Lots of pebbles and rocks.

Focused on ~~0.75 m square~~ 0.75 m square in NE corner (to speed up depth).

Zoe + Melissa.

10/30/06

Today Lots 5, 6, 7

Lot 5 (40cm-50cm)

- characterized by a lot of  
brack. Left existing large stones  
in south east corner in place,  
encountered no new large stones

Lot 6 (50cm-60cm)

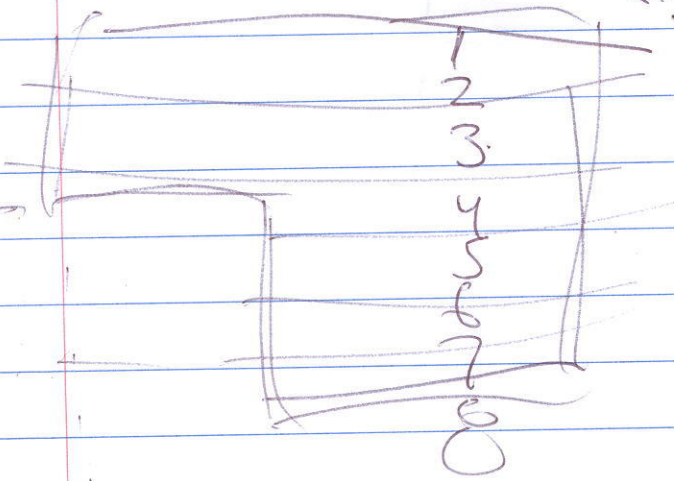

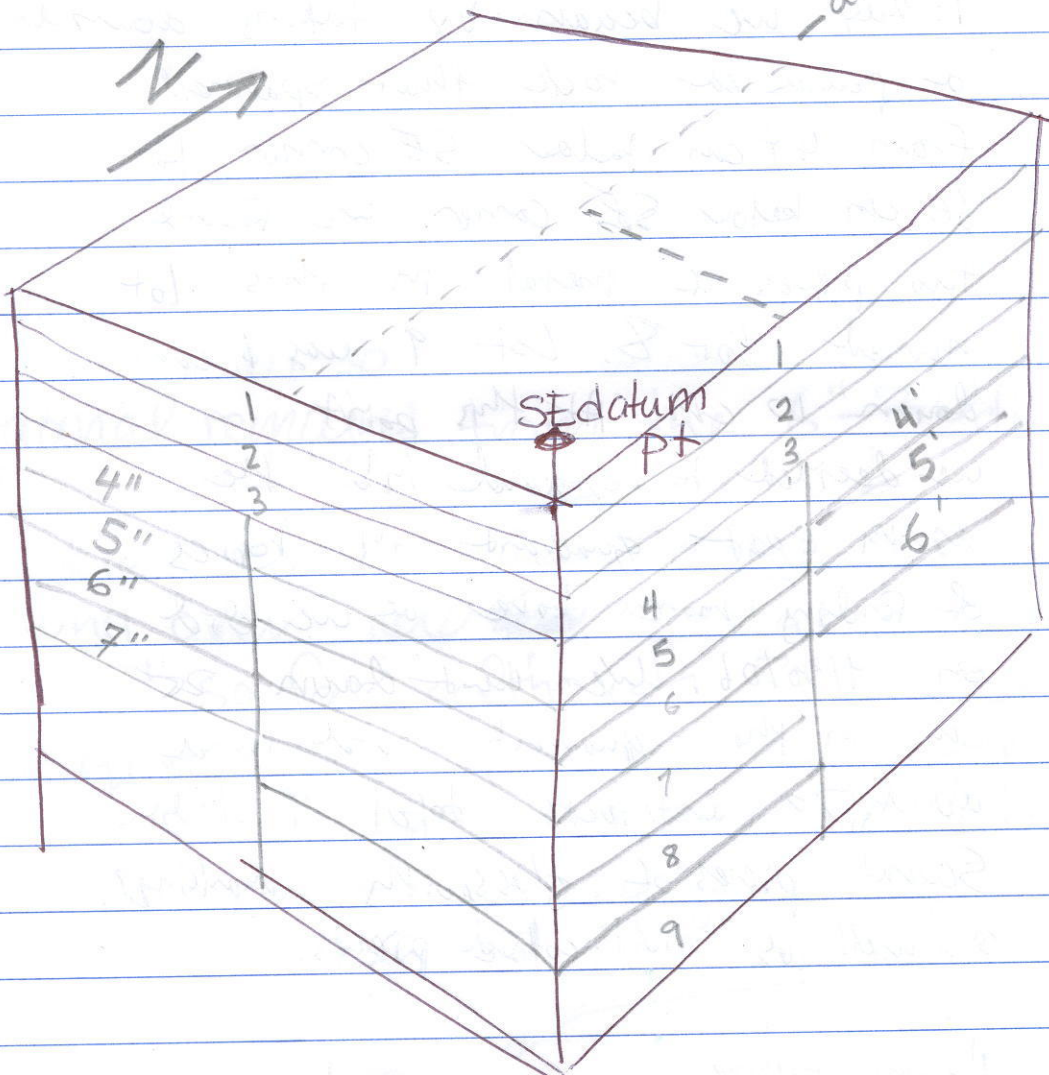

- found ~~16~~ pieces of bone,  
including some several centimeters  
long. Bone was greatly dispersed  
but concentrated in northern  
half of south east quadrant.

Lot 7

- found 14 pieces of bone  
including large tooth (large mammal)  
several long flat pieces of bone  
(1 mupper)

11/6/06

after lot 3

1116/06

Today we began by taking down a pedastled rock that spanned from 44 cm below SE corner to 66 cm below SE corner. We found two pieces of metal in this lot named lot 8. Lot 9 was 1 cm down 10 cm. At this point we decided to expand into the North East quadrant in hopes of finding more here as we did on 9/30/06. We went down 25 cm in this quadrant and found about 70 artifacts total including several pieces of glass with markings as well as multicolored pieces.

11/19/06

Found carbonized dirt around bone  
in lot 6'

11/19/06

Finished lot 6" and removed large  
faunal remains from the 6"-7" divide.  
Began lot 7. Soil began to become  
rockier, especially in the NW corner.  
Found over 100 ~~artifacts~~ artifacts in  
lot 7" so far, although Z. Nelson  
suggests that for the last day,  
we shift our attention to the  
SE quadrant.
