

The Experiential Learning in Industry Course

Your MSc. student is interested in pursuing a 6 month co-op at either a biotechnology or medical device company related to his/her field of study. Participating companies are located in New England as well as nationally. As a result, your student may be required to temporarily relocate and will, therefore, be absent from your laboratory during the co-op period. MSc. students are not required to apply for co-op positions, however, these opportunities present valuable learning experiences, enhanced training and industry connections that may further your research goals.

By signing below, you give permission for your student to participate in a 6 month co-op. The co-ops take place January-June or June-December.

Are there any stipulations for your student going on co-op? Please specify below (i.e. My student and I have come to the agreement that he/she will continue their thesis work over the summer, my student needs to complete this portion of their thesis prior to leaving, my student will write the background sections of their thesis during this\ period)
