UN MONDE PAR-DELÀ LES TOXIQUES:
De l'usage du chlordécone et d'autres pesticides dans les Antilles françaises

MALCOM FERDINAND
CNRS/Université Paris Dauphine

Malcom Ferdinand is an environmental engineer from University College London and a doctor in political philosophy from Université Paris Diderot. He is currently a researcher at the CNRS (IRISSO/University Paris Dauphine). At the crossroads of political philosophy, postcolonial theory and political ecology, his research focuses on the Black Atlantic and particularly the Caribbean, articulating the relations between current ecological crises and the colonial history of modernity. His field-changing first book Une écologie décoloniale: Penser l'écologie depuis le monde caribéen (Éditions du Seuil) won the Prix de la Fondation de l'Écologie Politique in 2019. This talk is drawn from his present research on contemporary environmental justice struggles in the French Caribbean in their relation to the history of colonialism and slavery.

Wednesday, April 7th
5:30 PM (EDT)
Registration Required

This talk is in French. It is the third in the series Roseau pensant: French and Francophone Studies and the Anthropocene.

Hosted by the Department of French Studies at Brown University
