Health Promotion through Digital Innovation:

Interactive computing applications have the potential to radically change health promotion

Andrea Parker, PhD
Assistant Professor
College of Computer & Information Science
Bouvé College of Health Sciences
Northeastern University

Professor Parker will present an overview of her research on the design and evaluation of novel computing applications that help individuals in low-income, ethnic minority populations overcome the disproportionate barriers to nutrition and physical activity that these groups face.

Friday November 22nd
12pm-1pm
121 South Main St. Providence, RI 02903
Room 245

Join our speaker and continue the conversation with a light lunch reception immediately following the talk in room 241
