The Department of Behavioral and Social Sciences’ i-BSHS (Innovations in Behavioral and Social Health Sciences) lecture series fosters collaborative discussion on innovative behavioral and social science-based approaches to improving population health.

“Eight years of building research partnerships with African American churches in Houston--Project CHURCH”

Dr. McNeill is an associate professor of health disparities research in the Department of Health Disparities at the University of Texas MD Anderson Cancer Center. Her research is on the elimination of cancer-related health disparities in minority populations and has particular emphasis on understanding the influence of social contextual determinants of cancer in minorities, with a special focus of the role of physical activity as a key preventive behavior. This research takes place in minority and underserved communities such as public housing developments, black churches, community-based clinics and low-income neighborhoods-communities with excess cancer death rates. She is PI of several community-based studies, primarily working with African American churches.
